DTS4 Tour Guard

Security Patrol System with event logging and asset tagging

It's never been easier to monitor the effectiveness of your security patrols. Provide all the information needed to increase security guard accountability, improve security protocols and log all site patrols historically to establish a timeline against any established breach.

A simple effective solution ideal for all locations but particularly large manufacturing sites, offices, hotels and any premises where good security is paramount.

The electronic wand carried by your security personnel is small and lightweight and can be attached to a belt, set of keys or placed in a pocket. It can hold up to 7,200 records however we recommend downloading after each patrol.

How it Works?

Your guards will visit specific locations where wall chips have been strategically placed around your premises and by tapping the handheld reader to each chip to log the date and time, before continuing to the next location. You can have as many wall chips as required (extra chips available on request). You (optionally) can also setup the Event Wallet, which holds several chips with pre-programmable events such as broken window, door ajar and so on. Should the guard be unfortunate enough to encounter an event, it can be recorded there and then. Once the route is complete the guard returns to the office to upload the data to the on-premise software application.

What's included

Data collection unit and carry pouch
Control logging software
Docking station
Event wallet
10 x wall points & holders
2 x guard ID tags

Summary

Mail order friendly – An out the box package including everything you need to improve tour guard efficiency.

User-friendly software – Easy to setup and start using quickly and efficiently.

Event Logs – Utilise the pre-configured event wallet to record security breaches on the spot.

Capacity – Each handheld unit can hold up to 7,200 transactions.

USB Download – The handheld unit downloads data via the included USB dock, to the PC running the supplied Tour Guard software.

Robust & portable – The handheld unit has a small, durable stainless-steel body encased in a rubber shell with waterproof adhesive. Lightweight and easy to carry, pocket or attach to a belt/key chain.

Tag assets – Why not also tag important assets such as fire extinguishers and fire doors to ensure regular adherence to H&S procedures.
