

Focus Attendance Board

The Focus Attendance Board (FAB) is designed to provide an accurate representation of current employees IN/OUT status. The FAB can provide an up-to-date list of who is in the building and which shift they are working, whilst monitoring shifts falling below expected levels. It can provide information on who arrived late/left early and why the employee may be absent, for example a holiday or doctors appointment. On larger sites the FAB can also show which department the employee last clocked.

Traffic Light Visual

The traffic light system is designed to notify you which departments/shifts are failing to meet the required attendance levels. The “Red, Amber, Green” colour codes will show where areas are working well and ones that are falling short, this can be configured to a certain percentage. The system will then calculate how many employees are in that location/group currently and provide a colour coded score.

This can then be managed, allowing you to allocate employee resource accordingly. At first glance you can see which areas are doing well and which ones's need re-evaluation, to improve productivity and avoid lost or wasted time.

Whether your shift rotation is simple or complex, the FAB refreshes regularly to display shifts in progress, those recently started and those about to start, giving you a rolling, real-time view of attendance, 24 hours a day.

The FAB has the ability to show a total of 14 different pieces of information for one individual employee. You can even set up and filter different displays for each site, dept. or cost centre. It is highly flexible and capable of relaying information in a variety of ways:

- Public monitor
- Receptionists desktop for visitor enquiries
- Team leaders laptop
- Managers PC
